

Recommender System For Nursing Homes

By: Shafiur Chowdhury and Ashwin Verma

Project Objectives

- Build a System that can give each nursing home an overall quality rating Based Off Various Features
- Try to find features graphically that might have influenced our system to give a rating that it did
- See what poorly rated nursing homes can do to improve their quality

Description Of Data

General information on currently active nursing homes, including number of certified beds, quality measure scores, staffing, and other information used in the Five-Star Rating System.

Model Description

- Accuracy= good rating/(good rating + bad rating)
- Good rating: $\text{abs}(\text{predicted}-\text{actual}) \leq 1$, Bad Rating: $\text{abs}(\text{predicted}-\text{actual}) > 1$
